webinar together \$40*

**[REGISTER AT AWWEE.ORG](https://www.awwee.org)**

Presented by:

**VIVIANA HEGER**  
OF COUNSEL

**MEYERS NAVE**

PFAS are found in many consumer products used daily, such as cookware, pizza boxes, and water and stain repellents for clothing. PFAS are also found in the environment, including drinking water, groundwater and soil, and they are persistent in the human body – meaning they do not break down and can accumulate and stay for long periods of time, which is how they earned the name, “forever chemical.”

*A request has been submitted to the State Bar of California to approve this course for one hour of MCLE credit. Approval is pending.*
